0 Preliminary Review: PIAGN 2024 Dual-Site Record

Data Quality Scan

Summary

The uploaded source is a final archaeological research report for the 2024 PIAGN season. It covers **two related archaeological complexes** in Lambayeque: **Huaca Letrada** in the middle La Leche valley and **Songoy-Cojal** in the middle Zaña valley. The report frames both as Gallinazo del Norte research targets and combines location data, prior research, hypotheses, non-destructive survey, targeted excavation, results, conclusions, and annexes. For CBSA purposes, this is a **strong starting source**, but it is **not yet a single-asset dossier**: it mixes two sites, and some chronological and specialist analyses are still pending. (INFORME FINAL PIAGN 2024 1.pdf, pp. 1–3, 15–19, 82–85) INFORME FINAL PIAGN 2024 1

INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Category	Status	Notes
Location and setting	✓	Both sites have valley location, district/province, topographic setting, and UTM coordinates. Songoy-Cojal is described in a middle-valley terrace/pampa setting with quebradas; Huaca Letrada sits at the base of Cerro Tambo Real, near the coastal

Category	Status	Notes
		Qhapaq Ñan. (INFORME FINAL PIAGN 2024 1.pdf, pp. 4–5) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
Original function and dates	Partial	The report proposes Huaca Letrada as a possible **regional political-population center** and Songoy-Cojal as a **craft/production center**, but these are still framed as research questions/hypotheses. Dating currently relies on Gallinazo affiliation, diagnostic ceramics, stratigraphy, and planned radiocarbon sampling rather than fully reported absolute dates. (INFORME FINAL PIAGN 2024 1.pdf, pp. 3, 14–16, 24–25, 30–31) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
Stratigraphy / development phases	Partial	The source provides excavation strategy and several stratigraphic descriptions: TAL-2 at Cojal, a cut in Area 1 at Letrada, and multiple Letrada units. This is useful for local sequences, but whole-site phase development remains incomplete, and Area 4 was not excavated in 2024. (INFORME FINAL PIAGN 2024 1.pdf, pp. 8, 20–32, 79–82) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
Contexts (social, historical, etc.)	Partial	The material clearly contains historical, environmental, technological, political, and regional-network content: Gallinazo/Moche debate, mining, irrigation, Qhapaq Ñan, settlement hierarchy, and climate damage. But these are not yet organized as CBSA contexts. (INFORME FINAL PIAGN 2024 1.pdf, pp. 10–16) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
Physical description (form / materials / technology / condition)	✓	Physical description is substantial. Cojal includes stone-built quadrangular enclosures, plaza/residential sectors, and the TAL-2 circular ceramic kiln; Huaca Letrada includes a poorly preserved monumental mound, terraces, rectangular structures with low stone walls, and possible corrals. Condition issues include huaqueo, erosion, sand movement, vegetation, and rainfall impacts. (INFORME FINAL PIAGN 2024 1.pdf, pp. 4–5, 12–13, 21–23) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
Finds and diagnostic material culture	✓	The report records Gallinazo ceramics, charcoal, ash, copper, slag, malacological material, a child burial, camelid remains, and possible red pigment/cinnabar. These are good diagnostic anchors, although several analyses are still preliminary or future-oriented. (INFORME FINAL PIAGN 2024 1.pdf, pp. 24–26, 30–31, 65–67, 79–80, 125–126) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Category	Status	Notes
Research history	✓	Prior scholarship and visits are well documented: Kosok, Shimada, Maguiña, Wester, Sharp, Guzmán, and others, plus references to 2015 work at Cojal and 2022 work at Letrada. This gives a usable research-history backbone for Stage 1. (INFORME FINAL PIAGN 2024 1.pdf, pp. 3, 10–15) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
Visual documentation	✓	The PDF contains embedded maps, plans, drone imagery, excavation photos, and stratigraphic drawings across the main text. Visual evidence is clearly present and useful. (INFORME FINAL PIAGN 2024 1.pdf, pp. 5, 7–10, 22–32 and throughout results) INFORME FINAL PIAGN 2024 1

Documentation Profile

Source	Tier	Type	Limitations
INFORME FINAL PIAGN 2024 1.pdf	2	Final archaeological project report with embedded field results, plans, photographs, stratigraphic descriptions, bibliography, and annexes	Covers **two sites**, not one; some lab/specialist still pending or preliminary; 2024 excavations selective rather than exhaustive. (INFORME FI 2024 1.pdf, pp. 1–3, 15–19, 20–21, 79–82, 125 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024

Site record

Tier 1 records likely exist beyond this upload—field tags, photos, maps, databases, inventories, and inspection records are explicitly referenced—but their accessibility outside the report is unknown. (INFORME FINAL PIAGN 2024 1.pdf, pp. 17–19, 82, 97–126)

INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Gaps List

- **Document scope: B general** for a single-asset CBSA. This upload does **not** deal exclusively with one asset; it covers both **Huaca Letrada** and **Songoy-Cojal** together. Stage 1 therefore needs a scope choice. (INFORME FINAL PIAGN 2024 1.pdf, pp. 3–4) INFORME FINAL PIAGN 2024 1
- **Absolute chronology remains incomplete.** The report repeatedly states the aim of obtaining charcoal and other samples for dating, but it does not yet provide a full set of reported radiocarbon results in the uploaded text. (INFORME FINAL PIAGN 2024 1.pdf, pp. 3, 15–16, 30–31) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
- **Whole-site phasing is still uneven.** The 2024 work is targeted and partial; Area 4 at Letrada was not excavated, and several excavated areas were small test exposures rather than full-area interventions. (INFORME FINAL PIAGN 2024 1.pdf, pp. 8, 20–21, 79–82) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

- **Condition data are strong locally but not yet unified.** Huaqueo, ENSO-related rain damage, vegetation, and sediment movement are described, but there is no single consolidated condition statement for each entire site. (INFORME FINAL PIAGN 2024 1.pdf, pp. 12–13, 21, 27) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
- **Specialist interpretation is still developing.** The osteological note is preliminary and image-based; archaeometric, metallurgical, zooarchaeological, botanical, and ceramic analyses are described as ongoing or future work. (INFORME FINAL PIAGN 2024 1.pdf, pp. 17–18, 65–67, 125–126) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Suggestions for Data Completion

- Please choose the **assessment unit** for Stage 1: **Huaca Letrada**, **Songoy-Cojal**, or the **two sites as one linked system**. The current source supports all three, but the dossier is not single-site by default. (INFORME FINAL PIAGN 2024 1.pdf, pp. 3–5) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
- Add any **radiocarbon results** or specialist reports already completed after fieldwork, especially ceramic, metallurgical, faunal, botanical, or soil/XRF analyses. The report signals these as important for chronology and interpretation. (INFORME FINAL PIAGN 2024 1.pdf, pp. 15–18, 30–31) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
- Upload any **previous season reports** explicitly referenced here—especially earlier Cojal and Letrada campaigns—to strengthen phasing and change-over-time analysis. (INFORME FINAL PIAGN 2024 1.pdf, pp. 13–16, 21, 27) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
- Add a **site-condition or management file** if available: monitoring notes, conservation records, boundary maps, or recent photographs would strengthen later authenticity/integrity assessment. The report already signals site monitoring and preservation concerns. (INFORME FINAL PIAGN 2024 1.pdf, pp. 15–16, 27, 82) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Timeline Rule

A Stage 1 timeline **can** be built from this source. The file contains dated research and intervention moments—around **1950** (Kosok visit), **1978** (Shimada visit), **1990** (Maguiña visit), **1999**, **2009**, **2010**, **2015**, **2022**, and the **2024** PIAGN season.

⚠️ **Occupation chronology remains incomplete**, because absolute dating is still being developed through sampling and later analyses. (INFORME FINAL PIAGN 2024 1.pdf, pp. 3, 12–16) INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Certainty Notations

- No mark = explicit in the uploaded material
- 〰 = inferred from two or more pieces of evidence
- ☁ = unresolved or interpretive uncertainty

Anything to add, correct, or change? Continue to Stage 1 with **Huaca Letrada**, **Songoy-Cojal**, or **the two as a linked system**?

End of 0️⃣ Preliminary Review

Continue to Stage 1 with Songoy-Cojal please!

InSites-CAA26
Thought for 4m 29s

1.0 Songoy-Cojal: Monument, Workshop, and Valley Corridor

💡 **Brief:** Stage 0 established Songoy-Cojal as a two-part complex in the middle Zaña valley: a monumental node at the valley throat, a 7-hectare stone-built residential/plaza sector on the Cojal terrace, and TAL-2 workshop evidence, but with chronology still partly dependent on typology, regional comparison, and pending specialist work. Stage 1 turns that base into a compact description, a working timeline, and the main contexts that frame how we read the site before moving to values. INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 cbsa-appendices

Building on Stage 0: the strategic middle-valley setting and the explicit evidence for ceramic/metalworking at Cojal, alongside an incomplete absolute chronology for the complex. INFORME FINAL PIAGN 2024 1 agent-for-agents

🔍 1.1 Site Description

Songoy-Cojal lies on the north bank of the middle Zaña valley in Cayaltí, Lambayeque, between roughly 80 and 200 masl, where the valley narrows and opens onto the Cojal pampa. The complex combines Huaca Songoy, placed at the gorge with broad visibility and access toward mineral zones and higher-altitude resources, with Cojal East, a c. 7-hectare sector of small fieldstones set in mud mortar, organized into quadrangular enclosures, a plaza, and a residential zone. South of that residential area is TAL-2, an open circular ceramic kiln about 10 m in diameter. INFORME FINAL PIAGN 2024 1

The report places the complex within Gallinazo del Norte occupation, and Huaca Songoy may have been built by Gallinazo 〰️, while Cojal preserves stronger direct evidence for Gallinazo production through kiln architecture, ash, charcoal, overfired sherds, and later conclusions linking the site to ceramic and intensive metallurgical activity, possibly by the 8th century. Over time, the complex shifted from prehispanic monumental, residential, and workshop use to a damaged archaeological landscape shaped by huaqueo, vegetation cover, wind-borne deposits, and the 2015 heavy-machinery exposure of TAL-2, followed by targeted scientific recording and excavation in 2024. The drone images from the 2024 report also make rectilinear buried architecture and the full adobe mass of Huaca Songoy more legible. INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

🕑 1.2 Timeline and Periods

Date / Period / Layer	Change in Use	Change in Structure	Notes
First centuries CE 〰	Probable Gallinazo regional settlement framework in Zaña	No direct Songoy-Cojal phase isolated in this report	Based on the report's discussion of dense Gal populations in Zaña and the first-three-centu at Cerro Corbacho/Ucupe; contextual, not a d date. INFORME FINAL PIAGN 2024 1
200–750 CE	Mochica horizon present in the middle Zaña valley	—	Sharp's 2009 visit identified Mochica-period s middle valley; this is a regional chronological relevant to Songoy-Cojal's coexistence questi INFORME FINAL PIAGN 2024 1
6th–7th centuries CE 〰	Strong Gallinazo–Mochica interaction in the wider Zaña/Lambayeque intervalle	No direct structural phase isolated	The conclusions describe solid Gallinazo–Moc in the later first millennium; relevant to Songc still broader than a sealed site phase. INFORME FINAL PIAGN 2024 1
c. 8th century CE	Intensive metallurgical activity at Cojal	Existing workshop/kiln zone in use	The conclusions state that Cojal provides the chronometric date for intensive metallurgical Lambayeque, around the 8th century. INFORME FINAL PIAGN 2024 1
1999	Regional Gallinazo research in Zaña	No site intervention recorded	Wester's work on Gallinazo at Cerro Corbacho Pueblo formed part of the regional frame late Songoy-Cojal. INFORME FINAL PIAGN 2024 1
2009	Renewed regional identification of middle-valley occupations	No site intervention recorded	Sharp identified Mochica and Sicán-period sit middle valley through diagnostic surface and finds. INFORME FINAL PIAGN 2024 1
2010	Systematic archaeological reconnaissance at Songoy-Cojal	Surface recording of the complex	Guzmán and Sharp documented abundant Ga ceramics and Middle/Late Mochica materials Cojal. INFORME FINAL PIAGN 2024 1
2015	Research focus on Cojal residential sectors; TAL-2 recognized after illicit machinery exposure	Exposure of part of the TAL-2 profile; nomenclature for Conjunto #8 established	The report links 2015 to residential research a notes that TAL-2 had already been exposed b machinery before the 2024 trench. INFORME INFORME FINAL PIAGN 2024 1
2024	Non-destructive survey plus targeted	Drone recording of Conjunto #8 and	3,205 m^2 of Conjunto #8 and 130,814 m^2 of H were recorded; TAL-2 was excavated through

Date / Period / Layer	Change in Use	Change in Structure	Notes
	excavation	Huaca Songoy; trench at TAL-2	exposing kiln stratigraphy. INFORME FINAL PIAGN INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024

⚠️ **Timeline incomplete:** the initial construction date of Huaca Songoy and the full phasing between the monumental and residential/workshop sectors are still unresolved in the uploaded report. INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

🌐 1.3 Contexts

🏞️ **Geographic** — Songoy-Cojal occupies two linked positions in the middle Zaña valley: Huaca Songoy at the gorge with broad views and access toward mineral and upland resources, and Cojal on an alluvial terrace ringed by shallow quebradas. This setting frames the complex as a corridor landscape; reading the site in turn reframes the middle valley as an organized node, not only a passage. 🧭 Planning: protect the spatial relationship between huaca, terrace, workshop zone, and approach routes. [INFORME FINAL PIAGN 2024 1.pdf: pp. 4–5, 22–23] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

⚙️ **Technological** — Cojal East and TAL-2 place craft practice in the foreground: stone-built sectors, an open ceramic kiln, ash, charcoal, overfired sherds, and later synthesis tying Cojal to ceramic and intensive metallurgical activity. This technological context frames the architecture as a working landscape; the site's recognition reframes regional copper and ceramic studies toward production locales rather than only finished artefacts. 🧭 Planning: prioritise protection and further sampling of TAL-2 and adjacent workshop areas. [INFORME FINAL PIAGN 2024 1.pdf: pp. 4, 15–18, 24–26, 85] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

🏛️ **Historical** — The complex sits inside an unresolved north-coast narrative: Gallinazo long underread in comparison with Moche, the 2010 Songoy-Cojal survey noting strong Gallinazo and Mochica material, and the 2024 season returning to clarify coexistence. That history frames the site as a test case; the site's recognition reframes Zaña as central to the Gallinazo–Mochica debate rather than derivative of Virú-based models. 🧭 Planning: interpret Songoy-Cojal together with its research history, not as an isolated ruin. [INFORME FINAL PIAGN 2024 1.pdf: pp. 10–15, 21–24] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

👥 **Social** — The plaza, residential sector, and nearby workshop areas suggest Songoy-Cojal was organized through clustered living and working spaces rather than a single isolated monument. This social context frames the complex as a place of coordinated everyday practice; reading it that way reframes household-scale production as part of broader community organization in the middle Zaña valley. 🧭 Planning: conserve the relationship between plaza, residential, and workshop sectors as one spatial system. [INFORME FINAL PIAGN 2024 1.pdf: pp. 4, 12, 21–24] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

👑 **Political** 💭 — The report repeatedly asks whether Songoy-Cojal was a multifunctional Gallinazo del Norte center acting autonomously or semi-autonomously, but that remains a research hypothesis, not a settled site description. This political context 💭 frames the monumental and productive evidence as potentially administrative as well as practical; if sustained, the site's recognition would reframe Zaña as one of Lambayeque's political poles rather than a supporting valley. 🧭 Planning: coordinate future interpretation with comparative evidence before fixing a single political label in public-facing material. [INFORME FINAL PIAGN 2024 1.pdf: pp. 3, 14–15, 83–85] INFORME FINAL PIAGN 2024 1

INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Expand: Songoy vs. Cojal as one asset, TAL-2 stratigraphy, or the Gallinazo–Mochica timeline — or continue.

💡 **Reflection:** If Songoy-Cojal is read mainly as a workshop landscape, do we underread its monumental-political role—or does that caution prevent us from overstating limited excavation evidence? Continue to Stage 2, or add/correct anything first?

End of 1️⃣ Description and Contexts

Continue to Stage 2 please.

InSites-CAA26
Thought for 3m 29s ›

2.0 Values: Production, Regional Debate, and Valley Monumentality

💡 **Brief:** Stage 1 showed Songoy-Cojal as a linked valley-throat monument and workshop-residential complex: the gorge setting and Huaca Songoy's prominence framed the site geographically, while TAL-2 and the Cojal sectors framed it technologically and socially. Stage 2 now translates those contexts and the incomplete but meaningful timeline into defined cultural values—especially where Songoy-Cojal becomes more than "a Gallinazo site" and instead carries site-specific meaning in Lambayeque archaeology.

cbsa-stages INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

⚠️ **Coverage uncertainty (A):** the uploaded source is a 2024 season report, not a complete single-site monograph. The report keeps several questions open: the exact occupation dates, the full nature of Gallinazo–Mochica coexistence, and how far Songoy-Cojal functioned as a primary multifunctional center rather than only a production zone. [INFORME FINAL PIAGN 2024 1.pdf: pp. 3, 14–16, 85] INFORME FINAL PIAGN 2024 1

INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Technological — "Ceramic firing and copper processing made visible"

- **Evidence:** TAL-2 is described as an open circular ceramic kiln selected for its location, artefacts, and visible architectural components suggesting Gallinazo manufacture; the 2024 trench exposed ash, charcoal, overfired Gallinazo ceramics, and a firing sequence consistent with a production feature. [INFORME FINAL PIAGN 2024 1.pdf: pp. 4, 24–26] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
- **Broader meaning:** In the technological context, Songoy-Cojal matters because production is not inferred from stray finds alone but tied to a readable kiln landscape and, later in the report, to broader ceramic and metallurgical activity at Cojal. [INFORME FINAL PIAGN 2024 1.pdf: p. 85] INFORME FINAL PIAGN 2024 1

Historical — "A test case for Gallinazo–Mochica coexistence"

- **Evidence:** The report states that abundant Gallinazo and Mochica materials at Songoy-Cojal created an “excellent opportunity” to clarify the nature of their coexistence in the Zaña valley. [INFORME FINAL PIAGN 2024 1.pdf: pp. 13–14] INFORME FINAL PIAGN 2024 1
- **Broader meaning:** Within the historical context, the site’s value lies in challenging simplified north-coast narratives derived elsewhere; Songoy-Cojal helps test whether coexistence, complementarity, or political distinction better fits Lambayeque evidence. [INFORME FINAL PIAGN 2024 1.pdf: pp. 10–14] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Scientific — "First dated anchor for Lambayeque metallurgy"

- **Evidence:** The conclusions state that Cojal provides the first chronometrically dated evidence for intensive metallurgical activity in Lambayeque, around the 8th century, and that no Gallinazo production site in the region had been reported or studied before 2024. [INFORME FINAL PIAGN 2024 1.pdf: p. 85] INFORME FINAL PIAGN 2024 1
- **Broader meaning:** This gives the site high research value: Songoy-Cojal is not just another findspot, but a chronological and technical reference point for future work on Gallinazo production systems. [INFORME FINAL PIAGN 2024 1.pdf: pp. 15–18, 85] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Social — "Work organized across household and community scales"

- **Evidence:** Cojal East includes a plaza and residential zone, and the report cites earlier research showing clay, copper, and stone crafts produced at domestic and small-workshop scales, with pottery firing in at least two workshops. [INFORME FINAL PIAGN 2024 1.pdf: pp. 4, 12] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
- **Broader meaning:** In the social context, Songoy-Cojal carries value as an organized living-and-working community rather than an isolated workshop; the spatial relation between plaza, residences, and production areas makes that coordination legible. [INFORME FINAL PIAGN 2024 1.pdf: pp. 21–23] INFORME FINAL PIAGN 2024 1

Landscape — "Monumentality at the valley throat"

- **Evidence:** Huaca Songoy occupies the gorge of the middle Zaña valley with broad visibility, access toward mineral zones and upland resources, and a fully adobe monumental mass newly documented by drone in 2024. [INFORME FINAL PIAGN 2024 1.pdf: pp. 4, 22–23] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

- **Broader meaning** 💭: This prominence may give the complex value beyond production alone, as a landscape marker of Gallinazo presence and coordination in the valley corridor—but the political force of that monument still needs stronger excavation support. [INFORME FINAL PIAGN 2024 1.pdf: pp. 12–14]
  INFORME FINAL PIAGN 2024 1

Value dynamics — These values mostly reinforce one another: the same kiln and workshop evidence supports technological, scientific, and social value together. The main tension is interpretive: whether the monument-plus-production combination justifies a stronger political reading, or whether that remains premature 💭. [INFORME FINAL PIAGN 2024 1.pdf: pp. 12–14, 85] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

2.1 Unified Attribute-Value-Significance-Implication Table

Attribute	Associated Value(s)	Site-Specific Meaning	🔑 Implication
(fabric/use) TAL-2 kiln profile with ash, charcoal, overfired Gallinazo sherds [INFORME FINAL PIAGN 2024 1.pdf: pp. 24–26] INFORME FINAL PIAGN 2024 1	Technological; Scientific	Producer knowledge survives in place	Loss of kiln deposits would weaken the clearest direct evidence for firing technology and Gallinazo production at Songoy-Cojal. INFORME FINAL PIAGN 2024 1
(use/fabric) Evidence for ceramic and metallurgical processing, including raw mineral-to-copper work [INFORME FINAL PIAGN 2024 1.pdf: p. 85] INFORME FINAL PIAGN 2024 1	Technological; Scientific	Multi-craft production landscape	Loss of this evidence would reduce the site's importance as a rare Lambayeque production reference rather than a simple habitation area. INFORME FINAL PIAGN 2024 1
(use/setting) Plaza, residential sector, and workshop proximity in Cojal East [INFORME FINAL PIAGN 2024 1.pdf: pp. 4, 12] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1	Social	Community and labour were spatially linked	Loss of the spatial relationship between living, gathering, and working areas would break the reading of coordinated social production. INFORME FINAL PIAGN 2024 1
(setting) Huaca Songoy's prominent position at the valley gorge [INFORME FINAL PIAGN 2024 1.pdf: pp. 4, 22–23] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1	Landscape	Monument controls valley perception	Loss of the monument's legibility would diminish the complex's corridor-scale presence and its relationship to movement and resource access. INFORME FINAL PIAGN 2024 1

Attribute	Associated Value(s)	Site-Specific Meaning	🔑 Implication
(interpretation) Mixed Gallinazo and Mochica evidence plus 8th-century metallurgical date [INFORME FINAL PIAGN 2024 1.pdf: pp. 13–14, 85] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1	Historical; Scientific	Regional chronology is debated here	Loss of contextual and dating evidence would weaken the site's role in rethinking Gallinazo–Mochica relations in the middle Zaña valley. INFORME FINAL PIAGN 2024 1

Top implications: the highest-stakes attributes are the **TAL-2 firing deposits** and the **multi-craft production evidence**, because they underpin both the site's distinctiveness and its research value. The **plaza–residential–workshop relationship** comes next, because it anchors the argument that production here was socially organized, not incidental.

INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

💡 **Reflection:** If the kiln and metallurgical traces carry the strongest value, should future protection prioritize workshop evidence over Huaca Songoy's monumental legibility? Continue to Stage 3, or add/correct anything first?

End of 2️⃣ Values Analysis

Continue to Stage 3 please.

InSites-CAA26
Thought for 2m 24s

3.0 Integrity: Legible Layout, Fragile Deposits

💡 **Brief:** Stage 2 identified Songoy-Cojal's strongest values in its production evidence, its role in the Gallinazo–Mochica debate, and its monumentality at the Zaña valley throat. Stage 3 stress-tests those values: not by asking whether the site is important, but whether the attributes carrying that importance still survive clearly, materially, and credibly enough to support the claim. cbsa-stages INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Integrity analysis reveals an uneven pattern: **Songoy-Cojal still reads clearly as a monument-plus-production landscape, but its deposits and original functions are more fragile than its setting and overall layout.** [INFORME FINAL PIAGN 2024 1.pdf: pp. 4, 21–26, 85] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

3.1 Nara Grid Table

Aspect	Attribute Description	Value Expression	Integrity

3.2 Integrity Condition Description

Songoy-Cojal retains enough **setting, form, and documentation** to sustain its main values, especially as a valley-corridor monument and production landscape. Its main weakness is **material and depositional integrity**: huaqueo, vegetation cover, wind-borne accumulation, the 2015 heavy-machinery cut at TAL-2, and selective excavation have all disturbed parts of the evidence base. Professional recording, drone survey, trench profiles, inventories, and reburial partly compensate for excavated loss, but not for earlier uncontrolled disturbance. [INFORME FINAL PIAGN 2024 1.pdf: pp. 15–19, 21–27, 118–126] INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

I can also assess integrity across three temporal states: **at-exposure, post-excavation, and as-potential**. Would you like me to apply this? cbsa-stages cbsa-appendices

💡 **Reflection:** If the workshop deposits are partly disturbed but the valley layout remains clear, should significance rest more on surviving fabric or on spatial relationships? Continue to Stage 4, or add/correct anything first?

End of 3️⃣ Authenticity and Integrity

Continue to stage 4, you can compare the Songoy-Cojal and the Huaca Letrada sites. If you need, scan the internet for more comparisons too.

InSites-CAA26
Thought for 2m 15s

4.0 Comparison: Production Node or Valley Capital?

💡 **Brief:** Stage 3 showed Songoy-Cojal as unevenly preserved: its valley setting and overall layout remain legible, but deposits and original use are more fragile because of huaqueo, partial exposure, and later disturbance. Stage 4 tests whether that surviving evidence makes Songoy-Cojal merely one Gallinazo site among others—or a distinct kind of site within the Lambayeque network. cbsa-stages INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

4.1 Comparison Set

Huaca Letrada *(Gallinazo del Norte, first millennium CE 〰)* — On **period** and **ensemble connection**, this is the closest comparator: the report treats both sites as key Gallinazo del Norte nodes, both placed strategically near north–south and east–west movement corridors, monumental architecture, and mineral zones. Songoy-Cojal is more distinctive on **selectivity/diversity** and **research potential**, because it currently has clearer direct evidence for ceramic firing and intensive metallurgical production, while Huaca Letrada stands out more for ceremonial materials, formal architecture, and burial evidence; on **condition**, Huaca Letrada is described as especially degraded by rain, sand movement, and vegetation. INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Pampa Grande *(Mochica horizon, overlapping sequence)* — On **period** and **ensemble connection**, Pampa Grande matters because the report says Huaca Letrada's occupation sequence overlaps with it, and the conclusions place Songoy-Cojal and Pampa Grande within a stronger southern Lambayeque zone of multiethnic interaction. Songoy-Cojal is more distinctive on **selectivity/diversity**: rather than a major regional consumer or political center, it preserves the production-side evidence 〰—kiln, workshop organization, and raw mineral processing—that helps explain how larger regional nodes may have been supplied. INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Sipán *(Mochica funerary center, first millennium CE)* — On **ensemble connection**, Sipán is useful because the report frames it as one of the major Lambayeque sites where copper and copper-alloy objects concentrate in elite Mochica tombs. Songoy-Cojal is more distinctive on **research potential**, because instead of showing finished prestige consumption, it offers direct evidence for extraction/processing and a chronometrically dated metallurgical horizon around the 8th century, making it unusually valuable for

reconstructing upstream production networks 〰. INFORME FINAL PIAGN 2024 1

INFORME FINAL PIAGN 2024 1

4.2 Comparison Summary

Songoy-Cojal is distinctive less for monumental scale than for **role**: within the uploaded comparison set, it is the clearest **production-centered Gallinazo node** linking monumentality, residential organization, ceramic firing, and copper processing in one place. Relative to Huaca Letrada it is more clearly artisanal; relative to Pampa Grande and Sipán it likely represents an upstream supplier position 〰 within a wider Lambayeque Gallinazo–Mochica network. INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

INFORME FINAL PIAGN 2024 1

💡 **Reflection:** If Songoy-Cojal is most distinctive as a producer site, does that make it more important than a ceremonial center—or simply different in the regional system? Continue to Stage 5, or add/correct anything first?

End of 4️⃣ Comparison with Other Assets

Continue to Stage 5 please.

InSites-CAA26

I'm pulling the Stage 5 template and significance rules from the uploaded guidance, then I'll turn the earlier findings on Songoy-Cojal into a compact significance statement with citations.

Thought for 50s

5.1 Significance: Valley Production and Gallinazo Autonomy

Songoy-Cojal is significant as a **rare Gallinazo del Norte monument-and-production complex** in the middle Zaña valley, where a gorge-top huaca, a plaza-residential sector, and the TAL-2 firing area together make political, social, and technological organization legible in one place. Its significance rests not on monumentality alone, but on the convergence of **landscape value** (control of a valley corridor and access to mineral/upland zones), **social value** (linked living and working areas), and especially **technological and scientific value** in the kiln and craft evidence. Although original use has ceased and parts of the deposits were disturbed, the site still retains enough setting, form, and recorded fabric to support these claims. INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

INFORME FINAL PIAGN 2024 1

What makes Songoy-Cojal distinctive is its evidential position within a wider Lambayeque network. The report presents Cojal as the first Gallinazo production site reported and

studied in the region, with multiple lines of evidence for ceramic firing, metallurgical activity, and copper extraction from Songoy, and with intensive metallurgy dated to about the **8th century CE**. Relative to Huaca Letrada, Songoy-Cojal is more clearly defined by production; relative to Pampa Grande and Sipán, it helps explain an upstream producer role within broader Gallinazo–Mochica interaction rather than only elite consumption. Its significance therefore extends beyond the asset itself, reframing the middle Zaña valley as an active node in regional craft, mineral, and political networks. Drone recording, inventories, and excavation profiles add documentary value, even if they do not fully compensate for earlier huaqueo and machinery damage. INFORME FINAL PIAGN 2024 1

INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

What remains open is the exact **political status** of Songoy-Cojal: the evidence supports a complex and possibly autonomous Gallinazo center 〰, but not yet a fixed label for regional authority. The occupation sequence is still incomplete, and the full terms of Gallinazo–Mochica coexistence remain debated. Experiential or spirit-and-feeling evidence is also largely absent in the uploaded material, so the current significance statement rests more securely on production, research potential, and regional network role than on ritual atmosphere or public memory. INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

INFORME FINAL PIAGN 2024 1

💡 **Reflection:** If Songoy-Cojal's clearest significance lies in production, should future interpretation foreground workshop evidence over the huaca's more visible monumental image? Continue to Stage 6, or add/correct anything first?

End of 5️⃣ Cultural Significance Statement

Please create a knowledge graph for the significance statement.

InSites-CAA26
Thought for 24s

Created document

Explain the context-effect relationships shown here in the graph.

InSites-CAA26

I'm grounding the explanation in the CBSA context-effect rule and the Songoy-Cojal evidence already used for the graph, so I can explain each relationship rather than just restate the node labels.

Thought for 1m 30s

In this graph, **context-effect** is not a single arrow. It works as a **two-way, evaluative relationship**: a wider context helps us see why a site feature matters, and then the recognized significance of the site changes how we read that wider context in return. CBSA is explicit that this is a framing relationship, **not** a causal claim. cbsa-stages

Also, not every edge in the graph is a context-effect edge.
Edges like **includes** or **contains** are structural. The context-effect logic is carried mainly by chains like **Place / Social Group / Practice → Songoy-Cojal → Cultural Value / Narrative / Comparator**.

1. Middle Zaña Valley → Songoy-Cojal → Landscape Value
The valley context frames the site first. The report places Songoy-Cojal at a strategic point in the middle Zaña valley: Huaca Songoy sits in the gorge with broad visibility, while Cojal lies on an alluvial terrace with access to mining zones and upland resources. That makes the site readable as a corridor node rather than just an isolated settlement.
The reverse effect is that Songoy-Cojal then reframes the **middle Zaña valley** itself as an organized Gallinazo landscape 〰—one structured by movement, visibility, and production, not just topography. That is why the graph links **Middle Zaña Valley** to **Landscape Value** and back through the site.

2. Craft Production / TAL-2 → Songoy-Cojal → Technological and Scientific Value
Here the technological context frames the site. TAL-2 is described as an open circular ceramic kiln, and the 2024 trench exposed ash, charcoal, and overfired Gallinazo ceramics consistent with firing activity. The nearby residential/plaza area and workshop evidence make production legible in place.
The reverse effect is especially strong: because Songoy-Cojal preserves this evidence so clearly, it reframes the wider Lambayeque discussion toward **production sites** rather than only elite consumption sites. That is why the graph connects **Ceramic Firing** and **Metallurgical Activity** to **Technological Value** and **Scientific Value**. The report's conclusions push this further by presenting Cojal as the first reported/studied Gallinazo production site in the region and as a chronometric anchor for intensive metallurgy around the 8th century CE.

3. Gallinazo del Norte / coexistence debate → Songoy-Cojal → Historical Value
The historical-social context frames the site through the report's broader argument: Songoy-Cojal is part of a Lambayeque Gallinazo landscape, and its mixed Gallinazo and Mochica materials make it a strong case for studying coexistence rather than assuming a simple conquest model.

The reverse effect is that Songoy-Cojal becomes evidence **within** that debate. In other words, the site does not just belong to the Gallinazo del Norte context; it helps redefine that context by supporting the view that Gallinazo in Lambayeque may have been politically and technologically substantial, with strong relations to Mochica. That is what the graph means by **Songoy-Cojal → Gallinazo–Mochica Coexistence Debate**.

4. Social organization → Songoy-Cojal → Social Value
The social context comes from the physical clustering of plaza, residential spaces, and workshop areas. Earlier research cited in the report argues that pottery firing occurred in at least two workshops and that work was organized across community and household scales.
The reverse effect is that Songoy-Cojal makes that form of organization visible as a heritage quality: the site helps us read Gallinazo labor not as scattered craft activity, but as coordinated everyday production embedded in residential life. That is why the graph places **Craft Production** close to **Cojal East** and the value nodes.

5. Huaca Letrada comparison → outward context effect
This is the graph's clearest **outward** context-effect relationship. Huaca Letrada is not there just as another place-name; it shows that Songoy-Cojal gains meaning through comparison with another strategic Gallinazo node in Lambayeque. Both are presented as key sites near major movement corridors and mineral zones.
The reverse effect is regional: once Songoy-Cojal and Huaca Letrada are read together, Lambayeque starts to look like a landscape with at least **two strong Gallinazo zones**, one in La Leche and one in Zaña. The site therefore reframes not only its own valley, but the political geography of the region 〰️.

The most important thing the graph is doing, then, is this: it shows that **Songoy-Cojal's significance is relational**. The site matters not only because it has a huaca, a kiln, or Gallinazo ceramics, but because those features sit inside larger geographic, technological, and historical contexts—and then send meaning back outward into those same contexts.

One caution: the graph slightly compresses uncertainty. The report still treats **full political status** as a hypothesis, so any reading of Songoy-Cojal as an autonomous Gallinazo center should stay at 💭 **/** 〰️ **level**, not be treated as settled fact.

End of 5️⃣ Cultural Significance Statement

Continue to Stage 6 please.

InSites-CAA26

I'm checking the Stage 6 spec so the closing review follows the required CBSA structure rather than improvising a generic wrap-up.

Thought for 35s >

6.0 Assessment Summary: Strong Production Signal, Incomplete Chronology

💡 **Brief:** Stage 5 concluded that Songoy-Cojal is most convincing as a Gallinazo monument-and-production complex whose significance lies in the convergence of valley setting, workshop evidence, and regional comparison. Stage 6 now checks how dependable that conclusion is in practice: which parts of the assessment are already strong, which gaps most limit it, and which small additions would materially sharpen the result. cbsa-stages INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

6.1 Assessment Process Summary

Strengths

The assessment is strongest where **technological, scientific, and landscape evidence converge**: TAL-2 preserves direct firing evidence, Huaca Songoy retains strong topographic legibility at the valley throat, and the 2024 campaign added drone coverage and trench documentation that make the monument-plus-production reading more secure. The comparative step also helped: against Huaca Letrada and the wider Lambayeque discussion, Songoy-Cojal stands out less for sheer monumentality than for preserving a production role tied to Gallinazo and later mixed regional interaction.

INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Issue	Small Improvement That Would Make a Difference
Occupation sequence is still broad rather than tightly phased	Add the completed radiocarbon results and link them directly to TAL-2, Huaca Songoy, and Cojal East contexts already sampled or targeted for sampling. INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
Production interpretation is stronger than functional detail	Upload the pending ceramic, metallurgical, botanical, faunal, and soil/lab analyses already anticipated in the project workflow. INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Next Steps

1. **Tighten chronology** by integrating the dating results the project explicitly sought through charcoal and other archaeological samples, so the current Gallinazo / Mochica / 8th-century framing is less dependent on broad regional correlation.
   INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1
2. **Consolidate the production dossier** by bringing together the TAL-2 trench data, drone mapping of Conjunto #8 and Huaca Songoy, and the specialist analyses promised for recovered materials into one site-specific interpretive set.
   INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Context-Effect Planning Implications

Across Stage 1, the strongest planning implication was to treat Songoy-Cojal as a **linked system**, not as separate isolated features. The geographic context pointed to protecting the relationship between **Huaca Songoy, the Cojal terrace, TAL-2, and route/resource access**; the technological context pointed to prioritizing **TAL-2 and adjacent workshop areas**; the social context pointed to conserving the **plaza–residential–workshop relationship** as one organized working landscape; and the historical/political contexts suggested that public interpretation should coordinate the site with the wider **Gallinazo–Mochica debate** and with **Huaca Letrada** as a regional comparator rather than fixing one final political label too early. INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

Note for Professional Practice

Because the site's strongest current claim is production-based while chronology and full function remain partially open, the most useful professional posture is **cross-specialist coordination**, especially between ceramic, metallurgical, stratigraphic, and spatial-recording work. The report already shows the project structured that way, with digital recording, geodatabase use, inventories, and specialist follow-up analyses, so the next interpretive gains are likely to come from synthesis rather than from a new label alone.

INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1 INFORME FINAL PIAGN 2024 1

💡 **Reflection:** When chronology is incomplete but production evidence is strong, should professional collaboration begin with lab specialists—or with regional comparators who can test the site's broader political reading? Expand or update any stage outputs, or are we done? When done → Session Debrief follows.

End of 6️⃣ Quality Check and Summary

Done

InSites-CAA26

I'm pulling the exact Stage 6 close-out rules so I can end the CBSA session cleanly and in the right order.

Thought for 33s

As specified in the CBSA workflow, the next step is the Session Debrief.

📋 Session Debrief

Before we wrap up — three quick reflections for the research team. Your answers stay right here in this conversation.

- **Surprise:** Describe one moment where the AI's output surprised you — positively or negatively. What did you expect instead?
- **Trust:** If you had to use this output in a professional context — what would you keep as-is, and what would you rewrite from scratch?
- **Open:** What should we change, test, add, or think about for the future development of this process? Anything goes.

(Feel free to answer briefly — even one sentence per question is valuable.)

End of 📋 Session Debrief

Surprise: I was positively surprised on the accurate of the information provided in the early steps. I’ve found as a computer science student that a lot of LLMs will display misinformation just to make the user happy, so that was nice.

Trust: I am not an archaeologist, but if I were and had to give a significance assessment to a conservation board on why it’s important to excavate an area or region, I would feel very comfortable using this agent.

Open: I am always a big believer in visual learning, and in step 6 the knowledge graph and dashboard are great. Visual steps in the early stages would be nice to see as well, even if they were just charts for the timeline or the implication-table.

InSites-CAA26

I’m checking the debrief protocol so I can respond in the intended wrap-up format and fold your feedback into the right next-step options.

Thought for 57s ›

Your feedback is very useful—especially the point that trust came from not overclaiming, and the request for earlier visual scaffolds. Per the workflow, I’ve logged your debrief and generated the session report.

📊 SESSION REPORT

Songoy-Cojal · 31 March 2026

═══════════════════════════════════

—— A. SESSION OVERVIEW ——
Assessment scope: Gallinazo monument-and-production complex in the middle Zaña valley
Stages completed: 0, 1, 2, 3, 4, 5, 6
Data condition: Strong 2024 report; chronology and specialist results still incomplete.

—— B. INTERACTION MAP ——

Stage	Action	What changed
0	!correct	Output language changed to English
1	↔replace	Assessment scope set to Songoy-Cojal
4	+add	Added Huaca Letrada as direct comparator
5	+add	Generated knowledge graph for significance statement
5	?question	Explained graph's context-effect relationships

- Most active: Stage 5 + Stage 4 (tie, 2 interactions total across post-assessment outputs)
- Accepted without change: Stages 2, 3, 6
- User-initiated content: The user fixed language, selected the site scope, expanded comparison, and requested visual/interpretive follow-up. cbsa-stages

—— C. SELF-REFLECTION ——
- Surprise: "I was positively surprised on the accurate of the information provided in the early steps. I've found as a computer science student that a lot of LLMs will display misinformation just to make the user happy, so that was nice."
- Trust: "I am not an archaeologist, but if I were and had to give a significance assessment to a conservation board on why it's important to excavate an area or region, I would feel very comfortable using this agent."
- Open: "I am always a big believer in visual learning, and in step 6 the knowledge graph and dashboard are great. Visual steps in the early stages would be nice to see as well, even if they were just charts for the timeline or the implication-table."

—— D. SESSION SIGNATURE ——
Dominant interaction style: Contributor
Trust profile: High-trust
Bot dependency: High
Key insight: The assessment was largely accepted as produced, with the user adding scope and visualization refinements rather than challenging the core analysis. cbsa-stages

When you're ready, you can use:
dashboard — interactive visual summary of the full assessment
read assessment — explore it from other angles such as evidence weight, stakeholder lens, or context-effect audit.

End of 📋 Session Debrief

CREAT THE KG - BASED ON UNTILL STAGE 5 (INCLUDED)

InSites-CAA26
I'm rebuilding the knowledge graph from the Stage 0 to Stage 5 assessment only, using the required CBSA graph shell and keeping the node set tight.

Songoy-cojal-kg-stage-0-to-5

where is the kg itself i cant see it

InSites-CAA26

I'm exporting the graph as a standalone HTML file so you can open it directly

Thought for 14s

Analysis paused

The canvas preview may not have opened on your side. I'm saving the same graph as a direct file instead

It's **not in the chat body**. It was created as a **canvas document** named:

`Songoy-cojal-kg-stage-0-to-5`

If your canvas panel is hidden, you may need to open the side panel / document area in the interface. The graph should be there as an **HTML preview**, not as normal chat text.

To make this easier, here is the **KG structure itself** in plain form:

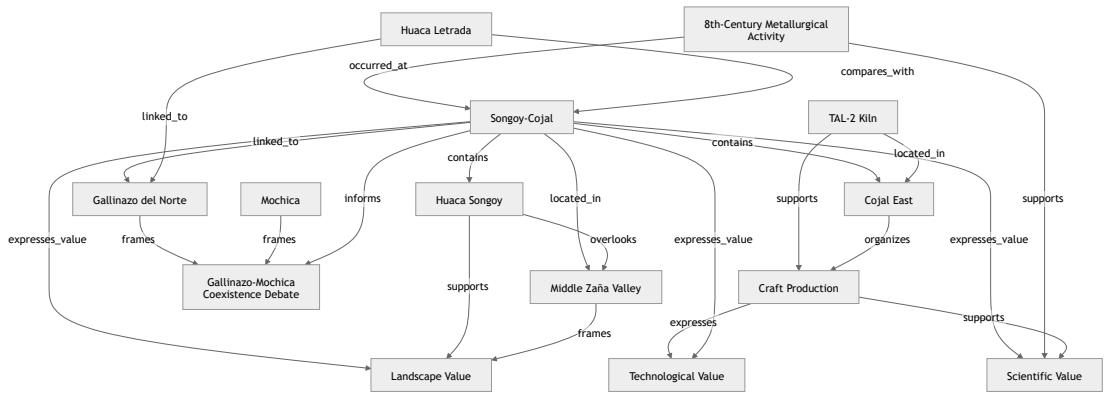
```
Songoy-Cojal
├─ contains → Huaca Songoy
├─ contains → Cojal East
├─ located_in → Middle Zaña Valley
├─ linked_to → Gallinazo del Norte
├─ informs → Gallinazo-Mochica Coexistence Debate
├─ expresses_value → Technological Value
├─ expresses_value → Scientific Value
└─ expresses_value → Landscape Value

Huaca Songoy
├─ overlooks → Middle Zaña Valley
└─ supports → Landscape Value

Cojal East
├─ organizes → Craft Production
└─ contains area of → TAL-2 Kiln

TAL-2 Kiln
├─ located_in → Cojal East
└─ supports → Craft Production
```

And here is the same graph in a **Mermaid** version you can see directly:



What is this?

I can also rebuild it right here as a **static image** so it is visible without the canvas.
